I am writing to apply for the Talent & Operations Manager role at your T-1 VC backed Mobility Start-up. The position stands out to me because it combines operational rigor with end-to-end ownership, which aligns with how I prefer to work.

In my previous roles as a Web Developer, I built systems from scratch and improved existing ones. I designed scalable web applications using Laravel and Next.js, integrated RESTful APIs, and implemented real-time features with WebSockets. I also optimized database performance through query tuning and caching strategies. These experiences taught me to think in systems and automate repetitive tasks.

One area that particularly interests me is eliminating manual work. I have consistently looked for processes that could be automated or removed entirely. Whether it was setting up CI/CD pipelines, deploying applications with Docker, or streamlining backend workflows, I approached each task with the mindset that if something is done twice, it should be automated by the third time.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident I can contribute to your team’s goals and would welcome the opportunity to discuss how my background fits your needs. I have attached my CV for your review.

Sincerely,

Md Shahanur Islam Shagor
