I am writing to apply for the Werkstudent Softwareentwicklung position at Sicherheit Nord. The opportunity to work on internal core systems that are actively used within the company is exactly the kind of hands-on experience I am looking for as a student of Software Engineering.

Through my professional experience as a Web Developer, I have built and maintained full-stack web applications using Laravel, Next.js, React, and MySQL. I have worked on designing database schemas, writing optimized queries, and developing stable RESTful APIs. Writing clean, well-documented code and performing refactoring to improve maintainability have been regular parts of my workflow.

One area that aligns well with this role is my experience with API integration and testing. I have implemented authentication systems, role-based access control, and third-party service integrations. I have also written unit tests and worked on debugging and performance optimization to ensure software reliability. These responsibilities match closely with the tasks described for this position.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the chance to discuss how I can contribute to the team at Sicherheit Nord.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
