I am writing to apply for the Entwicklungsingenieur:in F&E position at Ecalia. What Ecalia is doing with Scroll-Kompressor-Expander systems to radically improve heating and cooling efficiency is genuinely impressive. The idea of working at a deep-tech startup where engineering decisions directly impact global energy consumption is exactly the kind of challenge I want to be part of.

My background combines software engineering with a strong interest in AI-driven development and physical systems. I use Python regularly for data analysis, automation, and building calculation tools. I have experience with JavaScript and C++ as well, and I am comfortable writing scripts that turn engineering problems into working solutions. I also work with AI tools as an integral part of my workflow, using them for research, documentation, code generation, and prompt engineering, while maintaining critical oversight to ensure the outputs are correct and reliable.

Through my research and development work, I have built systems that require systematic thinking, structured documentation, and iterative testing. I designed a real-time server monitoring dashboard using Python, Node.js, and Socket.IO, where I planned the architecture, implemented the logic, and deployed it with Docker and Nginx. I also developed a wireless vision-aid system using YOLOv8n and Python, which involved designing experiments, analyzing performance data, and iterating on the design based on test results. These projects required the same kind of structured approach that Ecalia values: clear documentation, reproducible results, and a focus on what actually works.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am looking for a role where my contributions have real impact from day one, and where I can continue to grow as an engineer. Ecalia’s culture of flat hierarchies, AI-first workflows, and genuine engineering work is exactly what I am looking for. I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
