I am writing to apply for the Steuerberater (m/w/d) position at Taxtalente.de. While my background is in software engineering rather than tax consulting, I bring strong technical skills in building secure, scalable digital systems that can support a modern, digitally-focused tax firm.

Through my professional experience as a Web Developer, I have designed and developed full-stack web applications using Laravel, Next.js, Node.js, and MySQL. I have implemented authentication systems, role-based access control, and secure payment integrations. I have also built real-time features using WebSockets and deployed applications on Linux servers with Docker and Nginx. These skills directly support the digital working environment your partner firm emphasizes.

One area that particularly interests me is the opportunity to work with modern digital processes and tools. I built a Real-Time Server Health Monitoring dashboard that streams live system metrics using Socket.IO, with a fully Dockerized production setup. This project demonstrates my ability to create reliable, data-driven infrastructure that supports efficient workflows.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my technical background can contribute to your partner firm’s digital transformation.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
