I am writing to apply for the AMO position at Vashi Integrated Solutions. The role aligns with my background in full-stack development and my experience building reliable, scalable systems.

Over the past four years, I have worked professionally as a web developer, delivering end-to-end solutions using Laravel, Next.js, React, and Node.js. My work includes building RESTful APIs, implementing authentication and role-based access control, optimizing database queries, and integrating payment gateways. I also have experience deploying and maintaining applications on Linux servers with Docker, Nginx, and CI/CD pipelines.

A relevant example from my recent work is a multi-vendor e-commerce ecosystem where I developed the Laravel backend with MySQL, role-based access control, Redis caching, and Firebase notifications. The system coordinated customers, sellers, and delivery agents through a unified API layer. This project required careful attention to data consistency, real-time updates, and secure access across multiple user roles.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my experience can contribute to the team at Vashi Integrated Solutions.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
