I am writing to apply for the Localisation Linguist role at DNEG. The opportunity to help shape how digital humans speak across languages, working directly with the VAANI voice team, aligns closely with both my technical background and my interest in AI-driven language systems.

Through my work building AI-powered applications, I have gained practical experience integrating speech and language technologies into production systems. I have worked with OpenAI APIs, AWS Transcribe for speech-to-text, and text-to-speech pipelines, giving me a solid understanding of how these models behave, where they succeed, and how they fail. This technical literacy allows me to communicate effectively with engineers and turn linguistic observations into actionable product input.

I am a native Bengali speaker with strong English fluency and working knowledge of Hindi and Russian. I have built multilingual platforms that support multiple languages and currencies, which required careful attention to translation quality, cultural context, and user experience across different regions. I am comfortable defining style guides, evaluation criteria, and quality standards.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to DNEG’s linguistics function.

Sincerely,

Md Shahanur Islam Shagor
