I am writing to apply for the Brand Strategist position at Digital. I have been following how brands build authentic communities on social platforms, and I see a strong connection between my technical background and the strategic thinking this role requires.

Through my work as a full-stack and AI engineer, I have developed a practical understanding of audience behavior, content systems, and platform dynamics. Building user-facing applications has given me direct experience in defining user segments, designing engagement flows, and measuring how people interact with digital products. These skills translate naturally into social media strategy, where understanding audience growth and content performance is essential.

One area that particularly interests me is how short-form video and community engagement drive brand identity. In my projects, I have built real-time notification systems, role-based access controls, and interactive dashboards that required me to think carefully about user experience and content delivery. I am comfortable advising on content cadence, formats, and positioning because I have spent years designing systems where user engagement was the primary metric.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in building user-focused platforms can contribute to Digital’s brand and social growth strategy.

Sincerely,

Md Shahanur Islam Shagor
