I am writing to apply for the Trustee position at Pickle. The opportunity to contribute to the strategic oversight and long-term sustainability of a modern philanthropic organisation is genuinely compelling. Your focus on integrating technology and AI-driven efficiency with governance and long-term impact aligns with how I approach complex systems.

My professional work as a Full-Stack & AI Engineer has involved designing scalable architectures, implementing secure authentication and role-based access control, and integrating AI-powered features into production systems. I have built platforms that handle real-time data, user management, and automated workflows across web and mobile environments. This technical foundation gives me a practical understanding of how technology enables operational clarity and responsible growth.

One area where my experience connects directly to this role is in building systems that require both strategic thinking and disciplined execution. For example, I developed a multi-vendor e-commerce ecosystem with role-based access for customers, sellers, and logistics teams, ensuring data integrity and smooth coordination across stakeholders. I also built an AI-powered financial platform that automated document generation and integrated third-party services securely. These projects required me to think beyond code and consider governance, compliance, and long-term maintainability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I would welcome the chance to bring my strategic thinking, technical insight, and commitment to sustainable impact to the Board. I have attached my CV for your review and look forward to hearing from you.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
