I am writing to apply for the Cultural Research Specialist position at STEM Sync AI. The opportunity to work as a Humanities, Arts & Culture Evaluator appeals to me because it combines analytical thinking with qualitative assessment, an area where my technical background in AI and systems engineering provides a useful perspective.

Through my work developing AI-powered applications, I have gained practical experience in training models, processing diverse datasets, and evaluating output quality. These tasks require careful attention to detail, consistent judgment, and the ability to identify meaningful patterns across varied inputs. I approach evaluation work with the same discipline I apply to software systems: methodically, objectively, and with a focus on accuracy.

One area that particularly interests me is how AI systems interact with human-generated content. In previous projects, I have worked on systems that process natural language, handle user-generated data, and generate context-aware responses. This experience has given me a strong foundation in assessing content quality, relevance, and coherence from both a technical and a human perspective.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in AI systems and structured evaluation can contribute to your team at STEM Sync AI.

Sincerely,

Md Shahanur Islam Shagor
