I am writing to apply for the Head of Customer Experience position at Stars + Honey. Your mission to eliminate compromise between health and indulgence, and to build a brand that consumers genuinely love, is something I find genuinely compelling. The opportunity to build a consumer experience function from the ground up during a phase of rapid growth is exactly the kind of challenge I want to take on.

My background is in full-stack software engineering and systems design, where I have spent years building platforms that directly shape how users interact with products. I have designed and deployed scalable web applications, real-time communication systems, and monitoring dashboards that track performance, availability, and user behavior. These experiences have given me a strong analytical mindset and a practical understanding of how to build systems that improve satisfaction, reduce friction, and scale reliably.

A relevant example is the real-time server health monitoring dashboard I built, which tracks the availability and latency of multiple services simultaneously, streams live metrics using Socket.IO, and provides role-based access control. This project required me to think carefully about user experience, response times, and actionable reporting, skills that directly translate to building the consumer care operations and Voice of Consumer program you are looking for.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
