I am writing to apply for the VP of Product position at CAKES Body. While my professional experience has been primarily in software engineering and full-stack development, I have consistently worked on product-focused initiatives that bridge technical execution with strategic decision-making.

Over the past four years, I have designed and delivered scalable web applications and AI-powered platforms, taking ownership of the full product lifecycle from architecture to deployment. My work has involved building RESTful APIs, integrating payment gateways, implementing role-based access control, and optimizing database performance. These experiences have given me a practical understanding of how product decisions translate into technical outcomes.

In my role at Explo-IT, I collaborated closely with stakeholders and engineering teams to define product requirements, prioritize features, and deliver solutions that aligned with business goals. I built responsive UIs with Next.js and Tailwind CSS, developed real-time features using WebSockets, and deployed applications on Linux servers with Docker and CI/CD pipelines. This hands-on involvement across the stack has shaped my ability to evaluate trade-offs, communicate clearly across teams, and drive product improvements.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my product-oriented engineering background can contribute to CAKES Body.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
