I am writing to apply for the Quality Assurance Rater - German (Germany) position at TELUS Digital. The opportunity to contribute to high-quality validation data that directly influences search engines and AI technologies aligns well with my background in software engineering and AI systems.

Through my work as a Full-Stack and AI Engineer, I have developed strong analytical and research capabilities. I regularly evaluate system outputs, verify information accuracy, and apply consistent quality standards across complex projects. My experience building AI-powered applications has given me a practical understanding of how data quality impacts model performance and search relevance.

One area that particularly interests me is the evaluation of AI-generated content and search results. In my project work, I have trained AI assistants and integrated models into production systems, which required careful assessment of output quality, relevance, and accuracy. This has given me a solid foundation for the rating and feedback responsibilities described in this role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I look forward to the possibility of contributing to your team and completing the project-specific training and qualification assessments.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
