I am writing to apply for the Senior Data Scientist role at Lemon.io. Your model of connecting senior engineers directly with US and European startups aligns well with how I prefer to work: independently, with clear communication, and without unnecessary overhead.

Through research and development work, I have built AI-powered systems that combine Python, computer vision, and cloud infrastructure. One project involved developing a real-time object detection pipeline using YOLOv8n, optimized for edge deployment on low-cost hardware. I handled everything from model selection and training to building a custom UDP streaming protocol for ultra-low latency inference. This required strong Python skills, practical experience with data processing, and the ability to architect a complete system from scratch.

On the cloud side, I have used AWS extensively across multiple projects. For an AI-powered financial application, I built the backend using Express and TypeScript, integrated OpenAI APIs, and deployed on AWS EC2 with services like SES, S3, and Transcribe. I am comfortable designing scalable architectures, managing deployments, and making technical decisions that balance performance with maintainability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background fits your current needs.

Sincerely,

Md Shahanur Islam Shagor
