I am writing to apply for the Fachinformatiker Systemintegration / Systemadministrator position at IT Fabrik Systemhaus GmbH u. Co.KG. Your focus on delivering reliable IT infrastructure and customer-oriented solutions in the Hamburg region matches my own approach to building and maintaining stable systems.

My technical foundation includes hands-on work with Linux server administration, Docker containerization, and web server configuration using Nginx and Apache. I have practical experience deploying applications on AWS and Google Cloud, and I am comfortable managing virtualized environments and setting up CI/CD pipelines. These skills directly support the responsibilities of configuring Windows servers, managing virtual systems, and building customer networks that your role requires.

Through my professional experience as a Web Developer, I have deployed and maintained production applications on Linux servers, implemented monitoring solutions using Prometheus and Grafana, and handled server maintenance tasks. I have worked independently on IT projects, from initial setup through ongoing support, and I am comfortable communicating with clients to understand their needs and deliver reliable solutions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience can contribute to your team in Hamburg.

Sincerely,

Md Shahanur Islam Shagor
