I am writing to apply for the Senior ServiceNow Technical Consultant role at Wavestone Germany AG. The position involves leading architectural discussions, designing data models, and implementing cross-system integrations for a global financial services provider. This aligns with my experience in building scalable systems and working with complex data structures.

Through my professional experience as a Web Developer, I have designed and developed scalable web applications using Laravel and Next.js. I have built and integrated RESTful APIs for seamless data exchange between frontend and backend systems. I have also implemented authentication, role-based access control, and secure payment gateways, which required careful data modeling and referential integrity across multiple modules.

One area that particularly interests me is the emphasis on data modeling, service data mapping, and ensuring end-to-end data consistency. In previous projects, I have worked extensively with MySQL and PostgreSQL, designing database schemas, optimizing queries, and enforcing data integrity. I have also used GraphQL for flexible API design and Redis for caching strategies to improve performance. These experiences support the ability to translate logical enterprise data models into physical implementations.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to the success of this program. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
