I am writing to express my interest in the Interdisciplinary position with the US Army Corps of Engineers. The broad scope of this role aligns well with my technical background across software engineering, autonomous systems, and applied research.

My professional experience includes four years of full-stack development using Laravel, Next.js, React, and Node.js. I have built scalable web applications, RESTful APIs, and real-time systems with role-based access control, payment integration, and database optimization. I have also deployed and maintained applications on Linux servers using Docker, Nginx, and CI/CD pipelines.

In addition to web development, I have worked on AI and autonomous systems projects. Through research and development work, I built a real-time object detection system using YOLOv8n for visually impaired users, operating fully offline on edge hardware. I also developed a privacy-preserving blockchain framework for autonomous vehicle networks, integrating Zero-Knowledge Proofs and post-quantum cryptography. These projects demonstrate my ability to work across software, hardware, and security domains.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
