I am writing to apply for the ˆ QUIPE MET position at The Home Depot Canada. The role's focus on helping customers find the right solutions and building knowledge aligns with my approach to software development: understanding real needs and delivering practical, reliable results.

Through my professional experience as a Web Developer, I have built full-stack applications using Laravel, Next.js, React, and MySQL. My work has involved designing RESTful APIs, implementing authentication and role-based access control, and creating responsive, SEO-friendly user interfaces. I focus on writing clean, maintainable code and ensuring applications perform well under real-world conditions.

One area that particularly interests me is building systems that are both functional and easy to use. In my projects, I have integrated payment gateways, real-time features using WebSockets, and third-party services like cloud storage and social logins. I have also deployed and maintained applications on Linux servers using Docker and Nginx, with CI/CD pipelines for smooth delivery.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
