I am writing to apply for the Entrepreneur in Residence position at Logic Joe GmbH. The opportunity to take ownership of a digital product from validation to execution, with the full support of an experienced agency team, is exactly the kind of challenge I am looking for.

My background combines full-stack development with a strong drive to build and ship products independently. I have designed, developed, and deployed multiple web applications from scratch, handling everything from backend architecture and API design to frontend implementation and server deployment. I am comfortable working across the full stack and making technical decisions that balance speed, quality, and scalability.

A relevant example is Free Games Hub, a platform I built entirely on my own using Laravel and Tailwind CSS. I took it from an idea to a working product, managing the full lifecycle: system architecture, database design, user authentication, payment flows, real-time features, and deployment on a Linux server. This project taught me how to prioritize, make trade-offs, and deliver results without waiting for instructions.

I am also AI-affine and have integrated AI features into several projects, including AI-powered assistants and image processing pipelines. I regularly explore new tools and apply them where they add real value. I work well across disciplines and can coordinate between tech, design, and business stakeholders to move a project forward.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the chance to discuss how I can contribute to Logic Joe’s new product initiatives.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
