I am writing to apply for the Absolvent BWL / VWL / Wirtschaftsingenieur position at IfDQ Audit GmbH. Your description of a consulting role where newcomers are trained in quality management methods and standards aligns well with my approach to learning and problem-solving.

Through my software engineering background, I have developed strong analytical and process-oriented thinking skills. I am accustomed to analyzing complex systems, identifying inefficiencies, and implementing structured improvements. This way of thinking translates naturally to quality management consulting, where understanding workflows and optimizing processes is central.

One area that particularly interests me is the documentation and implementation of standards. In my project work, I have created detailed technical documentation, user guides, and system specifications for digital platforms. I am comfortable translating complex requirements into clear, actionable documentation, which I understand is a key part of preparing quality management handbooks and supporting certification audits.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am ready to learn your consulting methods and quality management tools from the ground up. I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
