I am writing to apply for the Junior ML Engineer position at Work Force Nexus. The opportunity to work on machine learning systems in a remote, full-time capacity is exactly the kind of challenge I am looking for at this stage of my career.

Through hands-on project development, I have built and deployed AI-powered applications that combine machine learning models with production-grade software engineering. My work includes training AI assistants using OpenAI's latest models, integrating Replicate API for image processing, and developing a real-time object detection system using YOLOv8n for assistive technology. These projects required me to handle everything from model selection and training to API integration and deployment on edge devices.

One area that particularly interests me is building systems where AI models operate reliably in real-world conditions. In my Wireless Vision-Aid for the Blind project, I optimized a YOLOv8n pipeline for ultra-low latency inference on a Raspberry Pi, implemented a custom UDP streaming protocol, and integrated multilingual text-to-speech feedback. This experience taught me how to balance model accuracy with performance constraints and how to deploy AI systems that work offline without cloud dependencies.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in AI engineering and software development aligns with the needs of your team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
