I am writing to express my interest in the Head of Engineering role at Lemon.io. Your mission to compress the hiring timeline from weeks to hours by building a technology-driven talent marketplace is a problem I find genuinely compelling. The transition from a services-driven model to a platform-driven one is exactly the kind of challenge where I believe I can contribute meaningfully.

Through my professional experience as a Web Developer, I have spent years working with modern stacks including Laravel, Next.js, React, Node.js, and TypeScript. I have built and integrated RESTful APIs, implemented authentication and role-based access control, and optimized database performance. I am also comfortable with AI/ML tooling and have applied it in practical projects, which aligns with your need for hands-on technical leadership.

One area that particularly interests me is the multi-layered problem you are solving: automated vetting, intelligent matching at scale, and demand-side bottlenecks. In my previous work, I have delivered real-time features using WebSockets, deployed applications on Linux servers with Docker and Nginx, and maintained CI/CD pipelines. I approach architecture decisions with a bias toward simplicity and business impact, not features for their own sake.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Lemon.io’s engineering team.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
