I am writing to apply for the Senior Infrastructure Engineer position at TecTake GmbH. Your focus on building and operating a stable, secure, and future-ready IT infrastructure for a growing e-commerce company aligns directly with my experience in managing Linux-based systems, cloud environments, and automated deployment pipelines.

Through my professional experience, I have worked extensively with Linux servers, Docker containers, and web server technologies such as Nginx and Apache. I have deployed and maintained applications in cloud environments including AWS and Google Cloud, and I have set up CI/CD pipelines to automate build and deployment processes. I also have practical experience with monitoring and observability tools like Prometheus and Grafana, which I have used to track system performance and availability.

One area that particularly interests me is infrastructure automation and standardization. In previous projects, I have automated routine IT processes through scripting and containerization, reducing manual effort and improving deployment consistency. I am comfortable working with both on-premises and cloud-based systems, and I approach infrastructure work with a focus on reliability, security, and long-term maintainability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my infrastructure and systems experience can contribute to TecTake’s continued growth.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
