I am writing to apply for the Pflichtpraktikum CAD-Design & FDM 3D-Druck position at Think3DDD GbR. Your work in 3D scanning, 3D printing, and medical technology, turning complex manufacturing into patient-specific products, is exactly the kind of applied engineering environment where I want to contribute and learn.

Through hands-on project development, I have built real-time systems that combine hardware, software, and practical testing. One relevant example is the Wireless Vision-Aid for the Blind (WVAB), where I designed a low-cost assistive system using YOLOv8n-based object detection, Raspberry Pi, and ESP32-CAM. This project required me to work with embedded hardware, optimize streaming parameters for low latency, and test output quality against real-world conditions. The process of configuring hardware, tuning parameters, and validating results mirrors the FDM 3D printing workflow of slicing, material selection, and quality assurance.

I am comfortable working with tools like Blender for 3D modeling and have a solid understanding of parametric design concepts from my software engineering background. My experience with Linux, Docker, and system optimization gives me a structured approach to printer operation, maintenance, and process improvement. I am eager to apply this technical foundation to CAD design and FDM printing in a medical context.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am a Software Engineering student at Voronezh State University of Forestry and Technology, Russia, and I am looking for a mandatory internship where I can contribute to real products while deepening my skills in CAD and additive manufacturing. I have attached my CV for your review and would welcome the opportunity to discuss how I can support your team.

Sincerely,

Md Shahanur Islam Shagor
