I am writing to apply for the Senior Product Analyst (m/f/d) position at Flix. The opportunity to be the analytical backbone of the Customer Experience stream, shaping how product analytics works from an early stage, is exactly the kind of challenge I am looking for.

My professional experience has been centered on building and optimizing data-driven systems. I have worked extensively with databases like MySQL and PostgreSQL, designed and integrated RESTful APIs, and built real-time features using WebSockets. This technical background gives me a practical understanding of how data flows through a system, which is essential for mapping customer journeys and identifying where value is created or lost.

One area that particularly interests me is the emphasis on turning raw data into actionable recommendations. In my previous roles, I have been responsible for analyzing application performance, optimizing queries, and presenting findings to both technical and non-technical stakeholders. I am comfortable owning a recommendation and pushing for decisions based on evidence, not just presenting options.

Flix is redefining mobility across 45+ markets, and the role offers real room to define metrics, build self-service analytics environments, and coach product teams. I am pragmatic, assertive, and energized by building something that is not fully formed yet. I am confident I can bring order to a forming practice and help your teams make sharper, better-evidenced calls.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my analytical mindset and technical skills can contribute to the Flix team.

Sincerely,

Md Shahanur Islam Shagor
