I am writing to apply for the Founders Associate Internship at Reviven. What stands out to me about Acoustic Index is the clarity of the mission: building a platform that connects acoustic manufacturers with planners, architects, and acousticians through structured measurement data. That kind of focused, early-stage problem solving is exactly the environment where I want to contribute and grow.

I am currently pursuing a Bachelor of Science in Software Engineering at Voronezh State University, which keeps me grounded in engineering thinking while working on real-world problems. I have been using AI tools in my daily workflow since the beginning, not as a novelty but as a practical layer for research, outreach, and process automation. This role requires someone who is AI-native, and that describes how I work naturally.

In my previous work as a Web Developer, I was responsible for identifying partner requirements, communicating directly with stakeholders, and building systems that supported business development workflows. I am comfortable reaching out to new companies, booking meetings, and keeping a sales pipeline organized. I approach outreach with the same discipline I apply to engineering: systematically, with clear documentation and follow-up.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am looking for a role where I can take ownership, work directly with founders, and grow quickly. I have attached my CV for your review and would welcome the opportunity to speak with you.

Sincerely,

Md Shahanur Islam Shagor
