I am writing to apply for the AI Developer (LLM Products) role at dexter health. Your mission to reduce administrative workload in healthcare through practical AI tools is something I find genuinely meaningful. I am drawn to the hands-on, product-focused nature of this role, where the goal is to ship working features rather than produce research papers.

Through hands-on project development, I have built AI-powered product features from the ground up. One example is an AI-powered financial application where I designed and implemented LLM-based workflows using OpenAI's latest models. I integrated these AI capabilities into a production backend built with Express, TypeScript, and MongoDB, and deployed it on AWS. The system included structured data extraction, automated PDF generation, and voice-to-text processing via AWS Transcribe. I also built evaluation logic to validate AI outputs and ensure reliability in real-world usage.

In addition to AI-specific work, I have strong software engineering skills across the full stack. I have developed and deployed production systems using Laravel, Next.js, Node.js, and various databases, and I am comfortable debugging across application logic, data, model outputs, and user-facing behavior. I use AI development tools like Copilot and similar assistants as part of my daily workflow to move faster while maintaining quality.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how I can contribute to building AI features that make a real difference for care teams.

Sincerely,

Md Shahanur Islam Shagor
