I am writing to apply for the Applied AI Developer role at dexter health. Your mission to reduce administrative workload in healthcare through AI-powered software is something I find genuinely important, and I would like to contribute to building features that make a real difference for care teams.

Through hands-on project development, I have built AI-powered product features from idea to production. I designed and developed AI assistants using OpenAI's latest models, trained them on custom datasets, and integrated them into full-stack applications. I have experience with LLM-based workflows, structured outputs, and validation logic, as well as building evaluation loops and quality checks for AI-generated outputs. I also integrated AI capabilities into existing backend systems and debugged failures across inputs, outputs, data, and user flows.

One project that closely matches this role is an AI-powered financial application where I developed the API using Express, TypeScript, and MongoDB, integrated OpenAI for intelligent assistance, and used AWS services for authentication, voice-to-text transcription, and PDF generation. This required turning ambiguous product ideas into working, production-ready features while maintaining high quality and reliability. I also built an AI-powered real estate platform with role-based auth, subscription plans, and image processing via the Replicate API.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to dexter health's AI development efforts.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
