I am writing to apply for the AI Engineer (LLM) role at dexter health. Your mission to reduce administrative workload for care teams through practical, production-ready AI features is exactly the kind of problem I want to work on.

Through hands-on AI engineering work, I have built and deployed multiple AI-powered product features from idea to production. I developed an AI-powered financial application where I integrated OpenAI's latest models to create intelligent assistants trained on custom datasets. The system processes voice messages through AWS Transcribe, generates PDF term sheets automatically, and handles authentication via OTP, Google, and Facebook. This project required designing LLM-based workflows, structured outputs, and fallback behavior, all running in production on AWS EC2 with Nginx.

A relevant example is an AI-powered real estate platform I built using OpenAI and Replicate API. I trained multiple AI assistants for property analysis, integrated image processing pipelines, and built role-based access, subscription plans, and Stripe payment flows. The system included cron job scheduling for automated tasks and evaluation logic to validate AI-generated outputs. This work required debugging across model outputs, application logic, and user-facing behavior.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to dexter health's AI product development.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
