I am writing to apply for the Programa Futuros Profesionales Productos Digitales position at Grupo Mariva, hosted by Universia Argentina. The opportunity to contribute to digital transformation in financial services, working with AI and user experience in a collaborative environment, aligns directly with my background and interests.

Through my work as a Full-Stack & AI Engineer, I have built digital products from concept to deployment. I have developed full-stack applications using Next.js, React, Laravel, and Node.js, and integrated AI capabilities including OpenAI assistants and image processing APIs. This experience has given me a practical understanding of how technology, business requirements, and user experience come together in product development.

A relevant example is an AI-powered financial application I developed, where I built the backend API using Express, TypeScript, and MongoDB, integrated OpenAI for intelligent assistance, and implemented features like OTP authentication, voice-to-text processing, and automated PDF generation. This project required working across technology, business logic, and user-facing functionality, similar to the responsibilities described in this role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my product development and AI integration experience to Grupo Mariva's digital team. My CV is attached for your review, and I would welcome the opportunity to discuss how I can contribute to your digital transformation initiatives.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
