I am writing to apply for the DevOps Engineer role at Lumiform. Your focus on digitising frontline operations and building an AI-powered platform for safety and efficiency is impressive, and I am interested in contributing to a product that serves over 45,000 active users across compliance-heavy industries.

My background includes working with cloud infrastructure, containerization, and automation. I have practical experience with AWS, Docker, and Kubernetes, and I have set up CI/CD pipelines to streamline deployments. I also have strong Linux and system administration skills, which I have used to manage servers, troubleshoot performance issues, and maintain secure environments.

In previous work, I deployed and maintained applications on Linux servers using Nginx and Apache, and I automated environment provisioning and monitoring processes. I have experience with PHP and Node.js, which are part of your stack, and I have worked closely with development teams to ensure smooth releases and operational stability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Lumiform’s infrastructure and automation goals.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
