I am writing to apply for the HSE / EHS Manager position at Linde AMT Schluechtern GmbH. Linde's leadership in thermal spray coating technology and its commitment to safety across industrial applications make this an organization I would be proud to contribute to.

My background is in software engineering and systems design, where I have developed a structured, process-oriented approach to problem-solving. Through professional experience building full-stack applications, I have become skilled at documenting workflows, identifying risks, and implementing systematic solutions. These skills translate directly to the responsibilities of an HSE role, where clear procedures, hazard identification, and continuous improvement are essential.

In previous work, I have designed and deployed real-time monitoring systems that track system health, availability, and performance metrics. This required me to establish clear reporting protocols, define measurable thresholds, and ensure compliance with operational standards. I approach every project with a focus on structure, documentation, and reliability, which aligns well with the requirements for managing HSE processes, conducting audits, and maintaining regulatory compliance.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical mindset and process-oriented approach can support Linde's HSE objectives.

Sincerely,

Md Shahanur Islam Shagor
