I am writing to apply for the QA Analyst position at Bees & Bears. Your mission to unlock capital for the energy transition through climate-focused fintech is both ambitious and meaningful, and I would welcome the chance to contribute to the quality of your platform.

Through my development work, I have gained practical experience with test automation using Jest, PHPUnit, and PyTest. I understand the importance of designing and maintaining automated test suites that support continuous delivery, and I am comfortable performing both exploratory and manual testing to catch issues before they reach users.

In previous projects, I collaborated closely with engineers and product managers during development to review requirements, flag edge cases, and contribute to acceptance criteria. I have triaged and investigated bugs, provided clear reproduction steps, and supported release processes by ensuring test coverage and sign-off criteria were met. Identifying gaps in coverage and proposing improvements to testing strategy has been a regular part of my workflow.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can help raise the quality bar at Bees & Bears.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
