I am writing to apply for the Internship / Thesis: Angular Frontend Development position at etalytics GmbH. The opportunity to contribute to etaONE, an Energy Intelligence Platform that helps industrial companies reduce energy consumption and COâ emissions, aligns directly with my interest in building software that creates measurable real-world impact.

My frontend development experience is built on TypeScript, HTML, CSS, and modern JavaScript frameworks. While my primary framework experience has been with React and Next.js, I have worked with Angular JS and understand the component-based architecture, dependency injection, and reactive patterns that Angular relies on. I am comfortable building single-page applications, writing maintainable and well-documented code, and collaborating closely with API teams to bring features from design to production.

Through my professional experience as a Web Developer, I have built responsive, high-performance user interfaces using TypeScript, Tailwind CSS, and modern frontend tooling. I have worked on real-time features, authentication flows, and complex dashboard interfaces that required clean state management and close coordination with backend developers. I am confident I can quickly adapt these skills to Angular and contribute meaningfully to the etaONE platform.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I am available for a full-time internship starting as soon as possible and would welcome the chance to discuss how I can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
