I am writing to apply for the Controller (m/w/d) position supporting your client in the renewable energy industry. While my career has been in software engineering, I bring strong analytical capabilities, experience building reporting systems, and a structured approach to data-driven decision-making that aligns well with the responsibilities of this role.

Through my professional experience as a Web Developer, I have designed and developed full-stack applications that rely heavily on accurate data reporting and analysis. I built real-time server health monitoring dashboards that track availability, latency, and system metrics, streaming live data to users via Socket.IO. This required setting up reliable data pipelines, performing variance analysis, and ensuring high data quality across multiple sources.

One area that particularly interests me is the focus on BI tools and reporting system development. I have worked extensively with databases including MySQL and PostgreSQL, and I have experience creating dashboards and visual reports that help stakeholders understand complex data quickly. My work on a real-time monitoring system involved building reporting structures that presented system health metrics clearly and supported operational decisions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my analytical and technical background can contribute to the financial steering and reporting needs of your client in the renewable energy sector.

Sincerely,

Md Shahanur Islam Shagor
