I am writing to apply for the IT Engineer fˆ…r digitale Lˆ¶sungen und technische Systeme position at CaraConsult GmbH. Your focus on building practical, stable digital solutions for the Caravaning industry aligns well with my background in software development and systems engineering.

With over 4 years of professional experience in full-stack development, I have worked extensively with PHP, Laravel, JavaScript, and TypeScript to build and maintain production applications. I am comfortable working across the full stack, from designing REST APIs and optimizing MySQL databases to deploying applications on Linux servers using Docker and Nginx. This technical breadth allows me to contribute to software development, automation, and infrastructure tasks from day one.

A relevant example is a real-time server health monitoring dashboard I built using Node.js, React, and Socket.IO, with a Python-based metrics collector and full Dockerized deployment. This project required me to understand system metrics, build real-time data pipelines, and ensure stable operation under continuous load. It reflects the kind of pragmatic, end-to-end thinking that your role requires.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am ready to take ownership of technical challenges, document solutions clearly, and contribute to the continuous improvement of your systems. I have attached my CV for your review and look forward to discussing how I can support your team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
