I am writing to apply for the Production Utility position at FXI. While my background is in software engineering, I bring strong technical operations skills that are directly relevant to maintaining reliable production environments.

Through my professional experience, I have worked extensively with Linux server administration, Docker containerization, Nginx and Apache configuration, and CI/CD pipeline setup. These skills are essential for ensuring that production systems run smoothly, deployments are consistent, and issues are resolved quickly.

In previous roles, I deployed and maintained web applications on production servers, managed server health and uptime, and automated deployment workflows. I am comfortable working with monitoring tools and maintaining system stability under real-world conditions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my production operations experience can contribute to FXI’s manufacturing and innovation goals.

Sincerely,

Md Shahanur Islam Shagor
