I am writing to apply for the Social Media Working Student position at GASOLINA. The opportunity to work directly with the founder on the launch of MAN IN A CAN, a product creating an entirely new category in functional beverages, is exactly the kind of hands-on, high-responsibility challenge I am looking for.

My professional experience has been in software engineering, where I have built and launched full-stack web applications from the ground up. This process has given me a strong sense of ownership over the entire lifecycle of a digital product, from initial concept and design to deployment and user engagement. I am accustomed to working in fast-moving environments where I need to ideate, execute, and iterate quickly based on real-world feedback.

One area that particularly interests me is the intersection of technology and brand building. In my previous work developing a travel agency platform, I was responsible for creating the user interface, managing content, and ensuring the platform communicated the brand's value clearly to a multilingual audience. This required me to think like a content creator and a marketer, not just an engineer.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my analytical and hands-on approach to GASOLINA, helping to shape the content strategy and build a community around MAN IN A CAN. I have attached my CV for your review and look forward to the possibility of contributing to your team.

Sincerely,

Md Shahanur Islam Shagor
