I am writing to apply for the VP Product (f/m/d) role at KoRo Handels GmbH. What stands out to me is how KoRo treats product as a unified system spanning the customer-facing D2C experience, operational backbone, integrations, and data platform. That view matches how I approach building software: not as isolated features, but as interconnected layers that together drive real business outcomes.

Through my professional experience as a full-stack developer, I have delivered end-to-end web applications where the product surface included storefronts, authentication flows, payment integrations, and admin dashboards. I built scalable systems using Laravel, Next.js, React, and Node.js, and deployed them on Linux servers with Docker, Nginx, and CI/CD pipelines. I have worked on e-commerce platforms that required balancing user experience with operational reliability.

A relevant example is a multi-vendor e-commerce ecosystem I built, which connected customers, sellers, delivery agents, and logistics teams through a unified platform. This project required designing role-based access control, integrating payment gateways, managing real-time notifications, and ensuring the system could scale across different user types. It gave me practical experience owning both the customer-facing experience and the operational systems behind it.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background aligns with what KoRo is building.

Sincerely,

Md Shahanur Islam Shagor
