I am writing to apply for the Organic Growth role on the founding team at GASOLINA. The idea of building a brand from scratch and creating a new product category like MAN IN A CAN is exactly the kind of challenge I want to be part of.

My background is in full-stack software engineering, but my work has always been about building things from zero. At Explo-IT, I worked directly with stakeholders to design and deliver web applications, handling everything from backend architecture to frontend UI and deployment. That experience taught me how to move fast, iterate based on feedback, and take ownership of the full delivery cycle.

What stands out to me about this role is the emphasis on building the organic growth engine from 0 to 1. I have experience creating systems that scale, but I also understand that early-stage growth is about experimentation, community, and direct engagement. I am comfortable working without a playbook and figuring things out as we go.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am ready to bring my building mindset, analytical approach, and willingness to do whatever it takes to GASOLINA. I have attached my CV for your review and would welcome the chance to discuss how I can contribute.

Sincerely,

Md Shahanur Islam Shagor
