I am writing to apply for the VP Revenue position at JOIN. Your mission to make hiring easy, fast, and fair through intuitive recruiting software is something I find genuinely compelling. The opportunity to shape the commercial future of a fast-growing SaaS company is exactly the kind of challenge I am looking for.

Through my professional experience as a Web Developer, I have built and maintained scalable web applications using Laravel and Next.js, focusing on performance, security, and user experience. I have implemented RESTful APIs, role-based access control, and secure payment gateways, all of which required a clear understanding of how technical systems support business goals and revenue generation.

One area that particularly interests me is the emphasis on data-driven decision-making. In my development work, I have optimized database queries, implemented caching strategies, and built real-time monitoring dashboards to track system health and performance. These experiences have given me a practical understanding of how data informs strategy and operational improvements.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in building scalable systems could contribute to JOIN’s continued growth.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
