I am writing to apply for the (Senior) Product Manager role at Weflow. Your Revenue AI Platform that automates Salesforce data capture and gives teams full visibility into deal and pipeline health is solving a real operational problem. I find the intersection of AI, data workflows, and revenue operations genuinely interesting.

What stands out to me is the combination of technical depth and product ownership this role requires. Over the past four years, I have worked across full-stack development and AI product delivery. I have built AI assistants using GPT models, integrated image processing APIs, and designed subscription and role-based systems. This hands-on experience gives me a practical understanding of how AI features should capture, summarize, and surface data, and where they add real value versus noise.

A relevant example is an AI-powered real estate platform I developed, where I trained multiple AI assistants, integrated Replicate API for image processing, and implemented role-based authentication with Stripe subscription plans. I owned the feature pipeline from discovery through deployment, writing clear user stories, coordinating with design and engineering, and tracking adoption metrics to iterate. This experience maps directly to owning a product area end to end, shaping AI features, and defining success through KPIs.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in AI product development and full-stack engineering can contribute to Weflow’s growth.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
