I am writing to apply for the Werkstudent:in IT Support & Data Governance position at Implify. Your work in automating warehouse processes for the healthcare sector and complex logistics operations is genuinely interesting, and I appreciate the hands-on, startup environment you describe.

I am currently pursuing a Bachelor's degree in Software Engineering at Voronezh State University, where I have built a strong foundation in IT systems, data structures, and structured problem-solving. Through my coursework and project work, I have developed practical skills in Linux system administration, Docker containerization, and database management with MySQL and PostgreSQL. I am comfortable setting up and maintaining internal tools, managing user access, and ensuring data quality.

In my professional experience as a Web Developer, I was responsible for deploying and maintaining applications on Linux servers using Nginx and Docker, documenting IT processes and internal standards, and providing technical support to colleagues. I also worked with authentication systems and role-based access control, which connects directly to your need for managing user rights and IT security. I am used to working in structured, solution-oriented ways and enjoy helping others resolve technical issues.

One area that particularly interests me is data governance. I have experience structuring and querying data using SQL, and I understand the importance of data quality, clear documentation, and reliable access management. I am confident I can contribute to your data structuring, reporting, and quality assurance tasks from day one.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how I can support Implify's IT and data governance efforts.

Sincerely,

Md Shahanur Islam Shagor
