I am writing to apply for the Vice President Finance (gn) position at selected heads GmbH. Although my professional background is in software engineering and AI, I have built technology solutions that directly address the digitalization and automation of financial processes, which aligns with the responsibilities of this role.

One area that particularly interests me is the development of data-driven financial systems. I designed and developed an AI-powered financial mobile application from the ground up. This system included a backend built with Express, TypeScript, and MongoDB, integrated with the OpenAI API to create AI assistants trained on proprietary datasets. The application automated several key financial workflows, including fetching data from Google Sheets, generating PDF term sheets, and sending them via AWS SES. Voice messages were converted to text using AWS Transcribe, and user authentication was handled through OTP via AWS SES, as well as Google and Facebook logins.

In previous work, I have focused on building scalable, secure, and automated systems. The AI-powered financial app demonstrates my ability to take ownership of complex, multi-component projects that require integrating various third-party services and automating manual processes. This experience has given me a practical understanding of how technology can drive efficiency and provide actionable insights in a financial context.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in building automated, data-driven financial systems can contribute to the goals of selected heads GmbH and its clients.

Sincerely,

Md Shahanur Islam Shagor
