I am writing to apply for the Applikationsmanager Individual- und Branchensoftware position at Landgard Service GmbH. With a background in software engineering and hands-on experience managing application lifecycles, I am prepared to take responsibility for system architecture, configuration, and development within your team.

Through my professional experience as a Web Developer, I have been responsible for ensuring application operations, designing system architectures during product evolution, and planning technical configurations. I have worked with PHP, Laravel, Next.js, and MySQL to build scalable systems, and I am comfortable coordinating with external IT service providers and acting as a liaison between technical teams and business departments.

One area that particularly interests me is the central role in the project to replace legacy IT systems. I have experience planning and executing system migrations, managing technical dependencies, and ensuring smooth transitions without disrupting operations. I approach such projects methodically, focusing on architecture, testing, and stakeholder communication.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am ready to learn OpenEdge and apply my existing software engineering skills to your environment. I have attached my CV for your review and welcome the opportunity to discuss how I can contribute to Landgard Service GmbH.

Sincerely,

Md Shahanur Islam Shagor
