I am writing to apply for the Business Development Manager*in im L&D & Changemanagement position at the knaps GmbH. Your focus on helping people and organizations recognize their potential through dialogue and development aligns with how I approach my own work: understanding needs first, then building solutions that create real impact.

Although my professional background is in software engineering, I have consistently worked in client-facing and project-shaping roles. In my experience as a Web Developer, I collaborated directly with stakeholders to identify business needs, prepared proposals and presentations, and managed projects from initial requirement gathering through to delivery. This process closely mirrors the consulting and business development cycle your team follows.

One area where I can contribute immediately is in structuring and improving internal workflows. I have experience taking ownership of projects, managing multiple priorities simultaneously, and creating clear documentation and decision-making materials. I am comfortable preparing presentations, analyzing market trends, and translating complex information into actionable insights for both internal teams and clients.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I would welcome the opportunity to discuss how my structured approach, client-facing experience, and ability to manage end-to-end projects can support the continued growth of the knaps GmbH. I have attached my CV for your review and look forward to hearing from you.

Sincerely,

Md Shahanur Islam Shagor
