I am writing to apply for the Junior Full-Stack Web Entwickler position at eigens.net. Your work building digital tools for independent pharmacies in Germany is practical and meaningful, and I appreciate your emphasis on structured onboarding and collaborative growth.

My professional experience centers on full-stack web development with Laravel and modern frontend technologies. Over the past few years, I have built and maintained production applications using Laravel on the backend and JavaScript frameworks on the frontend. I am comfortable working with PHP, MVC architecture, RESTful APIs, and relational databases, and I approach problems by understanding the underlying logic before writing code.

In my previous role at Explo-IT, I developed scalable web applications using Laravel and Next.js. I implemented authentication, role-based access control, and payment integrations, and optimised database queries for better performance. I also created responsive, SEO-friendly interfaces with Tailwind CSS and delivered real-time features using WebSockets. This experience has given me a solid foundation in the full-stack workflow you described.

One project I built independently is Free Games Hub, a full-stack platform developed with Laravel 12, Tailwind CSS, and MySQL. It includes user authentication, KYC verification, a points economy, admin dashboards, and real-time notifications. This project strengthened my ability to work across the entire stack and manage complex business logic.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would be glad to discuss how I can contribute to your team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
