I am writing to apply for the Wirtschaftsinformatiker / IT-Projektmanager position at Steamulation Jobs. Your focus on process optimization, digitalization, and AI-driven automation within a growing e-commerce environment aligns directly with the work I have been doing across software engineering and intelligent system development.

Through my professional experience, I have built and maintained scalable web applications using Laravel and Next.js, with a strong emphasis on API development, system integration, and workflow automation. I have worked extensively with RESTful APIs, authentication systems, and third-party services, and I am comfortable designing automated flows that connect ERP, CRM, and e-commerce platforms. My technical foundation in Linux, Docker, and cloud deployment (AWS, Google Cloud) supports reliable infrastructure management.

One area that particularly interests me is applying AI to create measurable business value. I developed an AI-powered financial application that uses OpenAI for intelligent assistance, automates document generation, and integrates with AWS services for real-time data processing. This project required designing automated workflows, managing API integrations, and ensuring system reliability, which directly maps to the automation and AI responsibilities described in your role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my skills in automation, API integration, and AI can contribute to Steamulation’s continued growth and operational excellence.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
