I am writing to apply for the Product Manager (m/w/d) position at BoniSoft Technologies GmbH. Your B2B SaaS platform for digital transformation and performance management addresses a real operational challenge, and I find the opportunity to shape product strategy and integrate AI into workflows genuinely interesting.

Through my professional experience as a full-stack developer, I have worked directly with product owners, engineering teams, and clients to define requirements, prioritize features, and deliver scalable web applications. This has given me a practical understanding of how to translate business goals into clear epics, user stories, and acceptance criteria that development teams can execute efficiently.

One area that particularly interests me is the integration of AI into product and documentation processes. I have hands-on experience building AI-powered features using OpenAI and Replicate APIs, including training assistants and automating workflows. I can help bring structure to how AI tools, prompts, and agents are embedded into your PM and development cycles.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the chance to discuss how I can contribute to BoniSoft’s product development and roadmap.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
