I am writing to apply for the PDM Application Developer position at K-tronik GmbH. The opportunity to work on application development and system integration within the defense and security sector aligns well with my technical background and interest in building reliable, secure software systems.

Through my professional experience, I have developed strong object-oriented programming skills using languages such as PHP, C++, and TypeScript. I have worked on full-stack web applications where I was responsible for requirement analysis, system design, implementation, and testing. This experience has given me a solid foundation in the software development lifecycle and the ability to work independently on complex tasks.

One area that particularly interests me is the integration of applications into existing IT landscapes. In previous projects, I have built and integrated RESTful APIs, configured databases, and deployed applications on Linux servers using Docker and Nginx. I am comfortable working with both frontend and backend systems, and I approach each task with attention to detail and a focus on maintainability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to your team at K-tronik.

Sincerely,

Md Shahanur Islam Shagor
