I am writing to apply for the Hardware Entwickler Digital position at K-tronik GmbH. Your work on high-performance directional radio communication systems for the wireless and communications sector is technically compelling, and I am interested in contributing to the development of digital hardware for these systems.

Through my research and development work in autonomous systems, I have gained practical experience with embedded platforms including NVIDIA Jetson Nano, Raspberry Pi, and ESP32 microcontrollers. I have worked on integrating digital components, defining interfaces between processing units and sensors, and implementing low-level communication protocols. My familiarity with C++ and Linux-based development environments supports the design and testing of digital hardware subsystems.

One area that particularly interests me is the integration of digital and analog hardware components. In previous projects, I designed systems that required careful selection of digital components, signal routing, and performance validation through measurements. I am comfortable working with oscilloscopes and test equipment to characterize component behavior and verify system-level performance.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in embedded systems and digital hardware development can contribute to K-tronik’s projects.

Sincerely,

Md Shahanur Islam Shagor
